A HEART WITH AN ELECTRICAL STORM: **WPW SYNDROME**

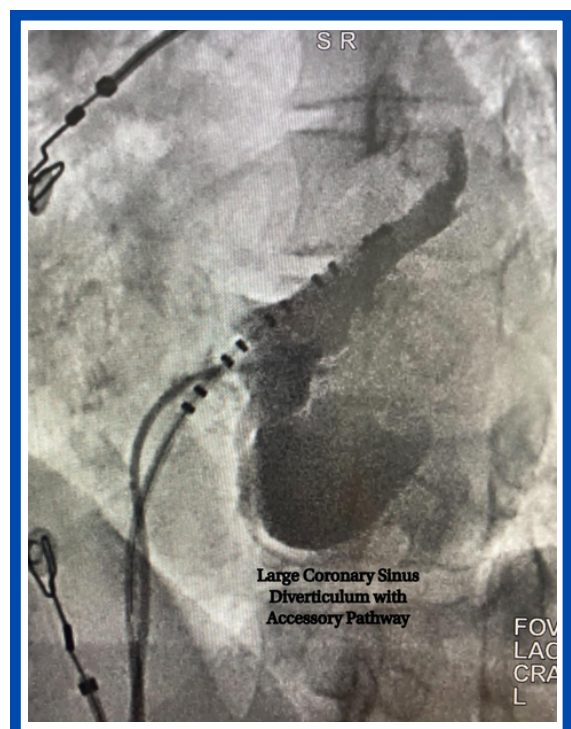

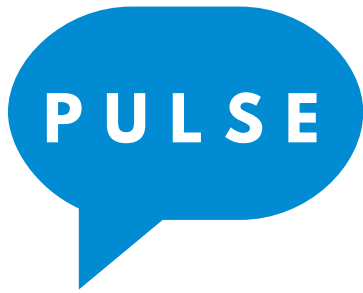

Mrs. X and her family were worried about the recent increase in her episodes of excessive heartbeats and dizziness. Things worsened for the family when she had to be hospitalised multiple times in the ICU to bail her out of the life-threatening event. Once an electric shock to the heart, also called a DC Cardioversion was used to convert her heart rhythm to normal.

HEALING TOUCH:

Dr. Aniruddha Vyas & the WPW Syndrome Diagnosis

It was then that they were referred to an electrophysiologist consultation at Jupiter Hospitals. Here, a team of experts led by Dr. Aniruddha Vyas, Consultant - Electrophysiologist & Interventional Cardiologist Jupiter Hospital Pune & Indore, evaluated her issue and diagnosed it as Wolf Parkinson White Syndrome.

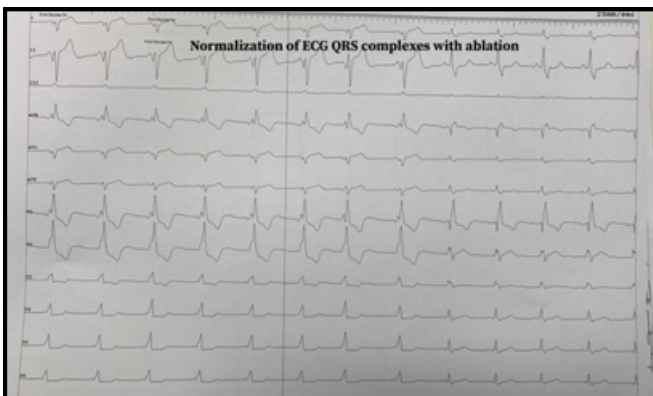

INDORE · OCTOBER 2023 · UPDATE 5

As per Dr. Aniruddha Vyas, “it is a rare condition where the heart has extra electric conducting tissue leading to episodes of rapid life-threatening heart rhythm.”

The lady was admitted, underwent an EPS and RFA procedure, and was cured of this dreaded disease—that too without a single incision in her body.

“ Dr. Aniruddha Vyas says, “The procedure is done under local anaesthesia by venous access from the thighs, and the patient walks 4 hours after the procedure, cured of the disease.

Interestingly, this is one substrate of heart disease that has the potential for a permanent cure.”
