

INDORE · DECEMBER 2023 · UPDATE 7

## A RADIANT TURNAROUND: OVERCOMING RECURRENT HEMANGIOPERICYTOMA WITH STEREOTACTIC RADIOSURGERY

Mr. X, a resilient 31-year-old male, known for his battle against Recurrent Hemangiopericytoma. Having undergone excision in 2020, he faced a distressing resurgence of symptoms, leading to severe lower back pain, impaired mobility, and a cascade of challenges impacting his personal and professional life.

Seeking surgical intervention, Mr. X faced a disheartening refusal from surgeons who deemed the lesion in his dorsal spine too large and complex, involving the spinal cord extensively. The potential surgical outcome posed greater risks than his current compromised state, pushing him to the brink of despair, with suicide looming as a distressing contemplation.

## THE TURNING POINT

In this dire scenario, Stereotactic Radiosurgery (SRS) emerged as a beacon of hope. Stereotactic Body Radiation Therapy (SBRT), a cutting-edge form of treatment, offered a lifeline. This intricate procedure demanded unparalleled precision, accuracy, and collaborative teamwork from simulation to execution.

## THE TRIUMPH

Mr. X, with steely determination, embraced the SRS journey. Over just two cycles, he experienced a miraculous transformation. The MRI revealed a dramatic response, showcasing a well-defined, possibly extra medullary intradural lesion at D11-12-disc level, in the left posterolateral aspect of the spinal canal. The bilobed 11.6x9.3x30mm lesion, once pushing against the conus and nerve roots, now demonstrated a remarkable regression.

## A NEW LEASE ON LIFE

In this dire scenario, Stereotactic Radiosurgery (SRS) emerged as a beacon of hope. Stereotactic Body Radiation Therapy (SBRT), a cutting-edge form of treatment, offered a lifeline. This intricate procedure demanded unparalleled precision, accuracy, and collaborative teamwork from simulation to execution.

VISHESH JUPITER HOSPITAL, INDORE*

The case of Mr. X stands as a testament to the resilience of the human spirit and the transformative potential of advanced medical interventions. Through the precision and innovation of Stereotactic Radiosurgery, a life fraught with pain, despair, and impending tragedy was replaced with hope, healing, and a renewed appreciation for the joys of everyday living.
